[In this volume, nine eminent scholars apply the theory and practice of a cultural politics of natural resources to spatial and temporal sites that range from petroleum fields in Nigeria to palm-oil plantations in Indonesia; from irrigation engineering in British India to contemporary environmental decision-making in the United kingdom; from global climate change to water scarcity in Gujarat.

The volume is organized around a set of keywords: waste, scarcity, security, territory, sovereignty, frontiers, conflict, expertise and community. These are significant, indicative terms whose changing meanings trace shifts in a vocabulary of cultural practices.]
